

LN™ 1063 Column Array

18001710 - LN 1063 Sub, 120US with Column
18001720 - LN 1063 Sub, 230EB with Column

The Peavey LN™ 1063 is a compact, powerful, lightweight and low profile portable column-array. Utilizing 500 watts of potential maximum power, the unit contains six 2.75" custom drivers for the mid-high column and a custom 8" driver for the subwoofer. Completely self contained, the unit has no visible cables in mono operation. Its clean design is well suited for applications where speakers should be heard and not seen. Coming in at 10 lbs lighter than our nearest competitor, the LN 1063 is extremely easy to carry: an entire PA system that can be moved by one person in one trip.

The satellite speakers feature rugged housing and quick attachment design. The subwoofer is both durable and lightweight.

The onboard mixer features 2 combo inputs, each with the option of selecting a guitar input, making this the first column array designed specifically with the acoustic guitar performer in mind. Two additional media channels feature stereo ¼" inputs and streaming audio Bluetooth in. Perfect for church, convention, DJ or club applications, the LN 1063 offers the best-in-class feature-to-value and performance in the industry.
